

DICHROIC GLASS

Swing the doors to creativity wide open offers a way to create a unique, ever-changing color to many interior building surfaces. Influenced by the color of the light, this transparent film provides a dichroic color effect, meaning it appears to change color when viewed at various angles. Design options can include using this as a single pane of glass, or to laminate products like metal mesh or fabrics to create a striking and unique feature piece that will elevate any space with dramatic effects. Printing or backpainting are also customizable options. Dichroic Glass brings a mood and a funkiness to any space. Strong enough for outside projects, yet with a playful elegance for inside spaces as well.
